Summary

I'm a software engineer with a strong passion for neural networks, AI agents, 3D and AR.

My definition of quality: Simplicity, Efficiency, Resilience, Affidability, Coherence, Armony, Beautyness

Experience

Software Engineer, *TD Group*

09/2025 – Present
Pisa, Italia

- Designed and implemented a microservice local cache in .NET for high accessed and static data in order to reduce database load
- Designed and implemented authorization layer for service communication due to Keycloak being inaccessible for the project
- Designed and supervised the developing of email service
- Designed and implemented config microservice, used by all service of the project
- Designed and implemented Profile Microservice, supervised and written task to front-end developer
- Planned and implemented the refactoring of a GoCommons library used by more than 15 microservice (bugfix, security assessment, efficiency improvement (time/memory))
- Introduced EntityFramework, written documentation for the team, and I taught how to use EF against SQL Injection risk
- Designed of .NET microservice template adopted by all microservice (Controller-Service-Repository & UnitOfWork)
- Introduced CD/CI DevOps basic standard

Software Developer, *E80 Group*

01/2024 – 08/2025
Reggio Emilia, Italia

- E80 develops fully automated Industry 4.0 factories, managing logistics and raw material flows by integrating PLCs with high-level software written in languages such as C#.
- Designed and develop the necessary customizations to build a fully tailored system according to the specific requirements of the end client.

Software Developer, *Abstract*

01/2023 – 01/2024
Lucca, Italia

- Developed responsive Single Page Application (SPA) web interfaces.
- Developed REST API endpoints within a microservices-oriented architecture.
- Developed unit tests for backend controllers and endpoints.
- Maintained Microsoft SQL Server stored procedures.
- Maintained legacy Java code using Spring and Hibernate, primarily with SOAP APIs.
- Maintained IBM DB2 stored procedures.
- Data migration with SSIS, from DB2 to SQL Server.
- All projects were commissioned by the National Institute for Social Security (INPS).

Education

High School Diploma

05/2020

Skills

- Machine Learning
 - Neural Network
 - AI Agents
 - Pipeline CI/CD
 - Kafka
 - Golang
 - DevOps
 - Sql Server
 - Microservices
- Deep Learning
 - MCP
 - Python
 - Entity Framework
 - LLM
 - Distributed Systems
 - .NET
 - Redis

Projects

Thorcino, github.com/cecinuga/thorcino
Pytorch-like framework to build neural networks backed by numpy.
I've learned how an autograd engine works, building layers, loss functions, SGD and ADAM optimizers, dataloader and fully training lifecycle.

ArXiv MCP server, github.com/cecinuga/arxiv-mcp-server
Enable your LLM agent to communicate with ArXiv.
I've learned how the MCP protocol works, and how it should be integrated in daily work with an LLM

Tiny LM, github.com/cecinuga/tiny-lm
A small language model, GPT-2 like

Lacli, github.com/cecinuga/lacli

- Linear Algebra in your console.
- lacli enable you to do most common linear algebra operations via terminal using stdin and stdout or files, it can be combined via pipe.
- It can be used by any AI Agent.

Fuzzy, <https://github.com/cecinuga/fuzzy>
A concurrent, fast and payload shared fuzzer.
