PROFILO PROFESSIONALE

I'm a software engineer passionate about neural networks, AI agents, 3D and AR.

To me, quality mean simplicity, efficiency, resilience, reliability, coherence, harmony.

ESPERIENZA LAVORATIVA

Software Engineer

TD Group

09/2025 - In corso Pisa, Italia

- Designed and implemented a local cache system for .NET microservices for frequently accessed and static data, reducing database load and improving response time
- Designed and implemented a custom authorization layer for app-to-service communication as an alternative to the inaccessible Keycloak infrastructure.
- Designed and supervised the developing of email service
- Designed and implemented config microservice, used by all service of the project
- Designed and implemented Profile Microservice, supervised and written task to front-end developer
- Planned and led the refactoring of the GoCommons shared library used across 15+ microservices, addressing bugs and security vulnerabilities while improving runtime efficiency and memory usage.
- Introduced Entity Framework to the development stack, created team documentation, and trained developers on secure EF usage and SQL Injection prevention.
- Designed and implemented a standardized .NET microservice template, adopted across all microservices, based on the Controller–Service–Repository pattern and Unit of Work architecture.
- Introduced CD/CI DevOps basic standard

Software Developer

E80 Group

01/2024 - 08/2025 Reggio Emilia, Italia

E80 develops fully automated Industry 4.0 factories, managing logistics and raw material flows by integrating PLCs with high-level software written in languages such as C#

- Designed and develop the necessary customizations to build a fully tailored system according to the specific requirements of the end client

COMPETENZE

Machine Learning		Deep Learning	
Neural Network		MCP	AI Agents
Python	Pipeline CI/CD		
Entity Framework		Kafka	LLM
Golang	Distributed Systems		
DevOps	NET	SqlServer	Redis
Microservices			

PROGETTI

Fuzzy

2025
https://github.com/cecinuga/fuzzy
Developed a high-performance, concurrent fuzzing tool.

Implemented parallel execution and payload reuse to maximize fuzzing throughput while minimizing redundant processing.

Thorcino

github.com/cecinuga/thorcino
Developed a PyTorch-inspired deep learning framework built on NumPy, implementing the core components of a neural network training ecosystem.

Designed and implemented an automatic differentiation (autograd) engine, neural network layers, loss functions, DataLoader, and training lifecycle.

Implemented and integrated SGD and Adam optimizers, gaining hands-on understanding of backpropagation, gradient computation, and model optimization.

ArXiv MCP server

github.com/cecinuga/arxiv-mcp-server
Enable your LLM agent to communicate with ArXiv. I've learned how the MCP protocol works, and how it should be integrated in daily work with an LLM

ESPERIENZA LAVORATIVA

Software Developer

Abstract

📅 01/2023 - 01/2024 📍 Lucca, Italia

- Developed responsive Single Page Application (SPA) web interfaces
- Developed REST API endpoints within a microservices-oriented architecture
- Developed unit tests for backend controllers and endpoints
- Maintained Microsoft SQL Server stored procedures
- Maintained and enhanced legacy Java applications built with Spring and Hibernate, ensuring reliability and stability of enterprise systems.
- Maintained IBM DB2 stored procedures
- Data migration with SSIS, from DB2 to SQL Server

PROGETTI

Tiny LM

🔗 github.com/cecinuga/tiny-lm

A small language model, GPT-2 like

LacIi

🔗 github.com/cecinuga/lacIi

Linear Algebra in your console

- Designed and developed **LacIi**, a command-line linear algebra tool supporting common matrix and vector operations through standard input/output and file-based workflows.
